

NORTEK

CAREERS

TRUE INNOVATION MAKES A DIFFERENCE

ARE YOU LOOKING FOR AN INTERNATIONAL PLAYING FIELD?

Nortek is a leading provider of ocean instrumentation to scientists and engineers in more than 80 countries. Nortek's eight regional offices serve small oceanographic institutions as well as large, multi-national corporations.

“ If interacting with colleagues in Asia, hosting a seminar in the Caribbean, and attending a scientific conference in Europe excite you, Nortek could be the right place for you. ”

DO YOU WANT TO SEE YOUR WORK COME TO FRUITION?

Nortek has one of the best design and development teams in the industry, attacking everything from acoustic transducer design, analog electronics, digital design, signal processing, firmware, software, mechanical design, testing, and production. We believe in fast, efficient and clever design – with the reliability required for anything that goes under water.

“ If you want to put your technical skills to work from day one, learn from the most experienced engineers in the field, and collaborate with the world's top oceanographic researchers, Nortek could be the right place for you. ”

DO YOU CARE ABOUT OUR WORLD'S MARINE ENVIRONMENT?

Marine life started 3 billion years ago and today scientist across the world work to preserve it from pollution, global warming, and man's expanding activity. At Nortek we provide a small piece of the puzzle by enabling people to understand how the ocean moves, where water is flowing, and how waves propagate.

“ If understanding nature interests you, Nortek could be the right place for you. ”

DO YOU WANT TO HARNESS THE OCEAN'S ENERGY?

Whether it is the green revolution or offshore fossil fuels, Nortek works with scientists and engineers tackling the world's energy needs into the future. Nortek helps green companies to understand how efficient their marine hydrokinetic devices are and how they will survive in the ocean. Nortek also works with the offshore oil and gas business units whose priorities are environmental precautions and worker safety. From environmental assessments, to operational concerns, Nortek is making a contribution.

“ If you want to contribute to the complex energy solutions of tomorrow, Nortek could be the right place for you. ”

DO YOU WANT TO GROW BOTH PROFESSIONALLY AND PERSONALLY?

Nortek's corporate culture embodies career growth alongside life balance. This means periods of intense work, being exposed to new challenges, and being pushed beyond prior limits, but it also means flexible work schedules, limited travel requirements, and respect for family time...along with a little fun. The warm working relationships among Nortek employees keep the energy up. We enjoy coaching our younger team members, learning from our senior leaders, and organizing a variety of team-building activities.

Bringing science to high-speed yachting, Nortek collaborated with team PUMA in the 2012 edition of the Volvo Ocean Race to develop a leeway sensor and successfully collected ocean currents around the entire world.

ABOUT THE CORPORATION

Nortek is an international instrumentation company, located near Oslo, Norway. We design, develop, manufacture and sell underwater acoustic products for scientists and engineers in more than 80 countries. The products are used to measure ocean currents and waves anywhere from the open ocean to tidal pools. The core technology is based on the Doppler principle and allows us to measure water velocity and movement on many different scales, depending on the customer application.

The company is privately held and has about 100 employees. Nortek's roots are in the scientific community, which pioneered the use of acoustic Doppler technology to measure ocean currents in the mid-1980s. Formed in 1996, Nortek grew rapidly after beginning

production in-house, then expanded its offerings into services and other marine technologies. In 2014, Nortek launched the new AD2CP hardware platform, allowing our engineers unprecedented flexibility in developing products for new and exciting applications.

The engine that drives Nortek is its multi-talented, global team, each advanced authorities in their field. A world-class design and development group, a client-facing team with direct technical industry experience, and a spirited support and production team define our ability to serve as well as collaborate with our customers.

NORTEK HIRES PEOPLE WITH THE FOLLOWING BACKGROUNDS:

- Mechanical Engineering
- Electrical Engineering
- Software Engineering
- Underwater acoustics
- Oceanography
- Marine Science
- Physics
- Coastal Engineering
- Business Administration
- Marketing
- Logistics
- Production Engineering
- Sensor production
- Assembly and testing
