

## Aquadopp Profiler 1 MHz

500m, Z-Cell, Generation 2

Up to 25 m current profiling range and no blanking; can measure near-surface or near-bottom currents

Need to collect accurate 3D currents very near the seabed or sea surface, in addition to a full water-column profile?

The Z-Cell (Zero Cell) 1 MHz Aquadopp allows current measurement to start right at the instrument's level through an innovative approach: it has side-looking beams fully integrated into the instrument's head, effectively removing the blanking distance normally applicable to ADCPs. The 1 MHz Z-Cell profiler also offers all of the features and capabilities of the 1 MHz Aquadopp Profiler.

See the details of the Generation 2 Aquadopp updates in the release notes here.

## **Highlights**

- ✓ Up to 25 m current profiling range
- ✓ Capable of measuring surface or bottom currents
- ✓ PUV-based directional wave measurements

## **Applications**

- Mounted on bottom frames, with ability to also measure near-bed currents
- Mounted on surface buoys, with the ability to measure also surface currents
- Mean flow measurements with high focus on ease of use and simplicity
- Measurements of combinations of waves and currents
