# AWAC - 400 kHz

### Real-time current profiles and directional waves with up to 100 m range

The AWAC 400 kHz ADCP has become the standard reference technology in submerged wave-measurement applications. Thousands of these ADCPs have been deployed to capture the full wave spectrum, in combination with current profiles. With a 100 m maximum range for wave measurements and 1.5 Hz sampling of the surface elevation, the AWAC 400 kHz is the optimal tool for deeper-water current and wave measurements.

#### Highlights

- Real-time current profiles and waves to 100 m range
- Acoustic surface tracking (AST) with vertical beam
- Can be used both with fixed frames and subsurface buoys

#### **Applications**

- Online measurements of currents and waves at long ranges
- ✓ Site studies for offshore wind platforms
- Measurement campaigns where the full wave spectrum is needed
- Monitoring of transient waves for channel wall protection
