DVL 333

300 m

Bottom-track from 0.1 to 375 m range; 300 m operational depth

The DVL 333 is a long-range Doppler Velocity Log that benefits from increased range with no compromise in performance or form factor. It allows vehicles to maintain bottom lock in a greater range of environments, increasing mission duration on long-range subsea and surface vehicles. This 333 kHz DVL is used by innovators in the uncrewed vehicle sector looking to expand vehicle capabilities into new environments.

Highlights

- Bottom track from 0.1-375 m range
- Per-ping and per-beam data quality estimates
- No change in form factor compared to higher-frequency options

Applications

- Large UUVs / AUVs operating at high altitudes
- USVs and crewed surface vessels requiring redundant navigation input
- Increase range of vehicles with existing DVL500 without vehicle redesign
